<https://www.linkedin.com/in/likeshdahake/>

SUMMARY

- Team Lead and AI/ML Engineer with 5+ years of experience in building scalable, intelligent systems across domains including algorithmic trading, SaaS platforms, eCommerce, and Gen AI solutions.
- Adept at leading teams, mentoring engineers, and deploying robust GenAI applications with Flask/FastAPI, Docker, and AWS/GCP.
- Skilled in leveraging cutting-edge technologies like OpenAI/Gemini LLMs, LangChain, Pinecone, and TensorFlow to solve real-world problems.
- Good experience with Python and Object-Oriented Programming.
- Hands-on experience in Scikit-learn, NLTK and Darts for advanced ML and Predictive analysis tasks.
- Experience in developing and implementing Web Services using REST Architecture.
- Used Git & Gitlab/Github/Bitbucket to deployment of code and maintaining Versions.
- Hands on experience with SQL, NoSQL (MongoDB), Redis Databases and Cloud Storage (S3 Bucket).
- Hands on experience with Pinecone, Faiss & Milvus VectorDB and DB management system like Hasura and Supabase.
- Experience in Exception handling in software development process for better understanding and handling of exceptions.
- Hands on experience of AWS, GCP & Docker.

Professional Skills

Programming:

Python Flask FastAPI Django
Git Cloud

Skills & Tools:

LLM OpenAI Gemini Tensorflow
LangChain HuggingFace NLP
ComputerVision RAG FineTunning
Scikit-learn Pandas Numpy
Matplotlib

Databases & Servers:

MySQL PostgreSQL MongoDB S3
Hasura VectorDB Redis Supabase

Development:

PyCharm Jupyter VS Code Putty

OS & Networking:

Windows Linux (Ubuntu, CentOS)

Project Management Tool:

Jira Bitbucket Gitlab Github

Cloud & Orchestration:

AWS GCP Docker

Certification Details:

IIT-Madras Pravartak – Advanced Certification in Data science and AI, 2023-24

Professional Experience:

December 2024 – Present

A) Asset Telematics Pvt Ltd – Hyderabad, India(Hybrid)

Project 1: Deep Vision as *ML and GenAI Engineer (Team Lead)* (Dec 2024 – Jan 2025)

- Designed and fine-tuned custom OCR models tailored for domain-specific text extraction tasks.
- Leveraged advanced LLMs, including OpenAI GPT and Gemini Flash models, extracting text from image.
- Developed web APIs with the Fast API framework.
- Deployed on GCP server using Docker containerization.

Project 2: Face Recognition Search Engine as *ML and GenAI Engineer(Team Lead)* (Feb 2025–June 2025)

- Built a scalable face recognition engine using the InsightFace(Buffalo_L) model for high-accuracy embedding generation.
- Indexed facial embeddings in Milvus Vector Database for similarity-based search and retrieval.
- Implemented Flask-based APIs for image upload, face indexing, and retrieval using face ID or similarity
- Integrated AWS S3 bucket for image storage.
- Deployed the entire application stack using Docker in CentOS VM.

Project 3: Sales Voice Chatbot as GenAI Engineer(Team Lead) (July 2025 – Till date)

- Working on development of a conversational AI bot for handling sales inquiries using speech-to-text and text-to-speech pipelines.
- Used Whisper for voice input and gTTS for speech output.

October 2022 – September 2024

B) Powerweave Software Services Pvt Ltd (Product Based). – Mumbai, India (Remote)

Project 1: Ewiz-SAAS and Snowkap as Python Developer (ML and AI Engineer) (Jan 2024 - Sep 2024)

- Leveraged advanced LLMs, including OpenAI GPT models, for policy document analysis, extracting text from electricity bills, and generating eCommerce product descriptions.
- Applied object detection and classification using ResNet50 models for eCommerce product image search, utilizing YOLOV4/V5/V8.
- Conducted predictive analysis of CO2 emission using algorithms such as linear regression and XGBoost.
- Managed database operations using SQL db, Pinecone, Hasura, and Directus, and developed web applications with the Flask framework.
- Gained initial hands-on experience with TensorFlow, scikit-learn, NLTK, and Darts.

Project 2: PHIONE as Python Developer (Oct 2022 – Dec 2023)

- Developed backend systems for algorithmic trading, covering key operations like backtesting, paper trading, and live trade deployment.
- Engineered high-performance asynchronous code using asyncio to manage concurrency, ensuring efficient and reliable trade execution.
- Integrated with broker APIs, enabling seamless execution of automated trading strategies across multiple brokerage platforms.
- Enhanced trading algorithms by implementing error-handling mechanisms and optimizing API communication for faster response times. Also worked in APIs Versioning.
- Ensured the accuracy and reliability of trading strategies, overseeing the entire lifecycle from testing through to live deployment.

August 2020 – October 2022

C) Barve Group of Technology – Nagpur, India

Project: Weather Data Analysis as Python Developer (Mar 2022 - Oct 2022)

- Analysed weather-related datasets using Python, Pandas, and NumPy, focusing on data manipulation, cleaning, and statistical analysis.
- Developed data models to identify patterns and trends in historical weather data, supporting decision-making processes across various projects.
- Created visualizations and detailed reports that were instrumental in improving predictive accuracy and operational efficiency.
- Collaborated with cross-functional teams to integrate weather data insights, enhancing the predictive accuracy of models.
- Performed exploratory data analysis (EDA) to uncover hidden relationships within the data, contributing to more precise weather forecasting.

Education Details:

- Master in Technology (Heat Power), Pune University (2017) (8.9 CPI)
- Bachelor of Engineering (Mechanical Engineering), Nagpur University (2011) (71%)

Hobbies and Interests:

Traveling, Gardening and Trekking

Languages:

English, Hindi, Marathi
