<https://www.linkedin.com/in/likeshdahake/>

SUMMARY

- Software developer with 4.4 years of experience in development of Algo- trading Platform, SAAS, Ecommerce, Micro-services applications and data processing with analytical programming using Python, Pandas, Numpy, Flask, MS-Excel.
- Experienced in predictive analysis using linear regression, XGBoost and LSTM algorithms.
- Good experience with Python and Object-Oriented Programming.
- Hands-on experience in TensorFlow, Scikit-learn, NLTK and Darts for advanced ML, DL and Predictive analysis tasks.
- Experience in developing and implementing Web Services using REST Architecture.
- Used GIT/Bitbucket to deployment of code and maintaining Versions.
- Hands on experience with SQL and Redis Databases. Proficient in writing SQL Queries.
- Hands on experience with Pinecone Vector Database and content management system like Hasura and Directus.
- Experience in Exception handling in software development process for better understanding and handling of exceptions.
- Knowledge of AWS, Docker and Kubernetes.

Professional Skill

Programming:

Pandas NumPy Matplotlib Seaborn
Flask FastAPI Django SQL Git

Skills:

LLM OpenAI YOLO Tensorflow
Resnet50 Hugging Face
NLTK(NLP) Scikit-learn Darts

Databases & Servers:

SQL MySQL PostgreSQL
Pinecone Hasura Directus

Development:

PyCharm Jupyter VS Code Putty

OS and Networking:

Windows Linux (Ubuntu)

Project Management Tool:

Jira Bitbucket Github

Cloud & Orchestration:

AWS Docker Kubernetes

Education Details:

- Master in Technology (Heat Power), Pune University (2014) (8.9 CPI)
- Bachelor of Engineering (Mechanical Engineering), Nagpur University (2011) (71%)

Professional Experience:

October 2022 – September 2024

A) Powerweave Software Services Pvt Ltd (Product Based). – Mumbai, India (Remote)

Project 1: Ewiz-SAAS and Snowkap as Python Developer (ML and AI Engineer) (Jan 2024 - Sep 2024)

- Leveraged advanced LLMs, including OpenAI GPT models, for policy document analysis, extracting text from electricity bills, and generating eCommerce product descriptions.
- Applied object detection and classification using ResNet50 models for eCommerce product image search, utilizing YOLOV4/V5/V8.
- Conducted predictive analysis of CO₂ emission using algorithms such as linear regression and XGBoost.
- Managed database operations using SQL db, Pinecone, Hasura, and Directus, and developed web applications with the Flask framework.
- Utilized NLP techniques for user and product-based recommendations, report generation, hypothesis testing, and model evaluation.
- Gained initial hands-on experience with TensorFlow, scikit-learn, NLTK, and Darts.

Project 2: PHIONE as Python Developer (Oct 2022 – Dec 2023)

- Developed backend systems for algorithmic trading, covering key operations like backtesting, paper trading, and live trade deployment.
- Engineered high-performance asynchronous code using asyncio to manage concurrency, ensuring efficient and reliable trade execution.
- Integrated with broker APIs, enabling seamless execution of automated trading strategies across multiple brokerage platforms.
- Enhanced trading algorithms by implementing error-handling mechanisms and optimizing API communication for faster response times. Also worked in APIs Versioning.
- Ensured the accuracy and reliability of trading strategies, overseeing the entire lifecycle from testing through to live deployment.

August 2020 – October 2022

B) Barve Group of Technology – Nagpur, India

Project 1: Weather Data Analysis as Python Developer (Mar 2022 - Oct 2022)

- Analysed weather-related datasets using Python, Pandas, and NumPy, focusing on data manipulation, cleaning, and statistical analysis.
- Developed data models to identify patterns and trends in historical weather data, supporting decision-making processes across various projects.
- Created visualizations and detailed reports that were instrumental in improving predictive accuracy and operational efficiency.
- Collaborated with cross-functional teams to integrate weather data insights, enhancing the predictive accuracy of models.
- Performed exploratory data analysis (EDA) to uncover hidden relationships within the data, contributing to more precise weather forecasting.

Project 2: CRM System for Coaching Institute as Python Developer (June 2021 – Feb 2022)

- Developed a custom CRM system using Python to manage student information, class schedules, attendance, and billing for a tuition Classes using SQL and Python.
- Developed a student and parent portal for viewing schedules, attendance, and payment history.

Certification Details:

IIT-Madras Pravartak – Advanced Certification in Data science and AI, 2023-24

Hobbies and Interests:

Traveling, Gardening and Trekking

Languages:

English, Hindi, Marathi

Marital Status:

Married
